

Rule Clarification:

To: All Super Stock Competitors

From: Larry Hudson & John Dykes

Date: August 13, 2019

Re: 2019 Super Stock Class Rules update

Saturday night we had a few GM604 crates with the wrong rocker arm ratio being utilized and were disqualified, moving forward you will need to make sure what ratio you are running and not take for granted just because it is marked as a 1.5 or a 1.6 doesn't mean that it's correct. Companies have built deflection in their aluminum rocker arm's which changed the ratio. If your ratio is 1.5 to 1.55 you can run at the 2019 Super Stock weight in the rulebook. If it's 1.56 to a 1.59 you must add 25 pounds and 1.6 to a 1.65 you must add 50 pounds. Nothing over a 1.65 will be allowed and you need to have yours checked by Larry at the speedway and have correct weight in your racecar or subject to be disqualified from this day forward. Sorry for the inconvenience but this has been the case for several years in the Pro Late Models and we have to stand by our 2019 Super Stock Rulebook.

Thanks, John Dykes
